## Alpha Wire Statement on the Restrictions of PFAS

Alpha Wire is assessing our compliance with current and upcoming regulations including the requirements of numerous global restrictions on the use of Per- and Polyfluorinated Substances (PFAS) in our products.

We are evaluating our complex and multi-tiered supply chains to determine whether and to what extent PFAS chemicals are contained in our current product offerings and to assure compliance to restricted material requirements of all future products and materials supplied by partners. We do not yet have the information or completed analysis. We have however, completed a high-level analysis on our products based on the definition of a PFAS considered a substance that has a carbon fluorine bond. Basically, this entails any fluoropolymers including but not limited to FEP, PVDF, ECTFE, TFE and ETFE. This analysis may be found at [REACH-RoHS-PFAS](#), in Column E.

Alpha Wire is committed to fulfilling our obligations and to being a responsible partner in addressing concerns about the health and environmental impacts of PFAS. As soon as more information is available, we will provide an update.

Authorized Signatory for the Alpha Wire Company:

---
